**TOP-RATED INTERNET FILTER INTRODUCES SAFE EYES 2006 FOR PC**  
*Technological Advances Ensure Safe Eyes Remains THE Name to Trust for Online Safety*

**Atlanta, GA** — The Number 1 Internet filter has just improved. And that's great news for families looking for a name they can trust for protection on the web.

**Safe Eyes 2006 is now available from [www.safeeyes.com](http://www.safeeyes.com).** The latest version of this Windows-based filtering system offers a number of new services for families and individuals. (A Safe Eyes Mac Edition is also available for Mac OS 10.4 at [www.safeeyes.com](http://www.safeeyes.com).)

**“We provide the latest technology to serve our customers** and help them access all the benefits of the Internet without having to deal with the negative influences that are on the web,” says Shane Kenny, President of SafeBrowse.com, the parent company of Safe Eyes. **“Our customers trust us** and we're excited to live up to their trust. Safe Eyes 2006 is our latest cutting-edge tool to provide fast, effective, and affordable filtering to families.”

Safe Eyes 2006 continues in the tradition that earned the product recognition in 2005 as **the leading Internet filtering product in independent testing**. Among the latest advances with Safe Eyes 2006:

- ?? **Instant Messenger Logging** ... Safe Eyes 2006 allows the four major IM services (AOL, Yahoo, MSN, and ICQ) to be logged on both sides of the chat session. This safety feature allows parents to know who their children are chatting with on IM. Safe Eyes 2006 also allows for IM blocking.
- ?? **Time Limits** ... you can set the amount of time each user can spend daily on the Internet. When the time limit has been reached, the user is logged off. In addition, limits can also be placed on the time of day that the web can be accessed.
- ?? **Program Control** ... any program on your computer that uses the Internet can be blocked, providing better control of peer-to-peer file sharing programs.
- ?? **Key Phrase Blocking** ... allows you to move beyond individual words to block out longer phrases.
- ?? **Fast User Switching** ... Safe Eyes 2006 is 100 percent compatible with the Microsoft Windows XP Fast User Switching feature.

These advances are in addition to existing Safe Eyes features that people have come to trust, including the filtering of unwanted sites, objectionable content, popup windows, and chat rooms. **Safe Eyes 2006 offers nearly three dozen categories of content that you can choose to filter.** Safe Eyes 2006 is also flexible, allowing you to specify different filtering categories for individual users on your PC.

Safe Eyes 2006 is available at no cost for a 15-day risk-free trial. After that, there is a \$49.95 annual fee for Safe Eyes. For more information, go to [www.safeeyes.com](http://www.safeeyes.com).

SafeBrowse.com, Inc. is an Internet-technology company specializing in the development of security products that benefit and protect families, businesses, schools, and churches. Founded in 1999, SafeBrowse.com continues being a pioneering industry leader: Safe Eyes 2005 was selected as the No. 1 filtering product in independent testing by a leading publication; Safe Eyes for Mac is the first world-class filter for Mac users; and its Flexible Filtering quickly became an industry standard. For details, go to [www.safebrowse.com](http://www.safebrowse.com) or [www.safeeyes.com](http://www.safeeyes.com).
